Fund Overview

**Called up:** Percentage of LP’s commitment contributed to date. e.g. An LP with a $1mn commitment will have had $826k called up.

**Distributed (DPI) %:** Distributions received to date as a percentage of called capital. e.g. An LP with a $1mn commitment has had distributions of $278k - which is 33.7% of the $826k called.

**Remaining Value (RVPI) %:** Valuation of unrealized investments as percentage of called capital. e.g. An LP with a $1mn commitment has unrealized capital valued at $941k - which is 113.9% of the $826k called.

**Multiple:** Distributions plus unrealized value. e.g. in this case 1.48 - which is \((33.7\% + 113.9\%) / 100\)

**Net IRR %:** The net IRR earned by the LP to date after fees & carry. e.g. in this case 25.5%, counting both distributions and unrealized value.

**Benchmark Comparison:** See how the selected fund benchmarks against the median fund in the relevant peer group, or another selected benchmark.

The first line shows the performance of the median fund (in this case 2000 / US / Buyout – click on the link to see a benchmark overview and the fund constituents). The second line shows the difference between the performance of the selected fund against those of the median fund.

**Fund Performance:** See the complete range of performance data for the selected fund.

**Benchmark Tools:** Benchmark against median, pooled, average or money weighted funds. You can also change the benchmark criteria (vintage, type or location), but should take care when comparing with different vintage years.

</table>
Vintage Year - The year of first draw down of capital for investment purposes, which generally coincides with the first year of a partnership's term. The year in which a private equity fund makes its first investment.

Capital Commitment - Investors in a private equity fund commit to investing a specified sum of money in the fund partnership over a specified period of time.

Capital Calls/Draw Down - When a PE firm decided to make an investment, it will approach the LPs in order to draw down their money. This is the actual act of transferring the committed capital.

\[
\text{Called up} \% = \frac{\text{Contribution}}{\text{Commitment}} \times 100
\]

Called-up: measure of the cumulative capital invested relative to the total capital committed

Capital Distribution – These are the returns that an investor in a private equity fund receives. It is the income and capital realised from investments less expenses and liabilities. Once a limited partner has had their cost of investment returned, further distributions are actual profit.

\[
\text{Distributed} \% = \frac{\text{Total Distribution}}{\text{Contribution}} \times 100
\]

Distribution to Paid-In (DPI): measure of the cumulative investment returned to the investor relative to invested capital.

Fair Value/Market Value – A valuation that represents the amount at which an asset could be acquired or sold in a transaction between willing parties. Also referred to as Ending Market Value, Net Asset Value or Residual Value.

\[
\text{Rem. Value} \% = \frac{\text{Unrealised Value of Fund}}{\text{Contribution}} \times 100
\]

Residual Value to Paid-In (RVPI): measure of how much of the investors’ capital is still tied up in the equity of the fund.

Multiple (X) reveals how many times investors have, or are likely to get their money back and make a profit from their investments. It is the sum of the Residual value of the portfolio plus distributed capital.

\[
\text{Multiple} (X) = \left\{ \begin{array}{l} \text{Distribution} \% + \text{Value} \% \end{array} \right\} /100
\]

Internal rate of return (IRR) = This is the most appropriate performance benchmark for private equity investments. In simple terms, it is a time-weighted return expressed as a percentage. IRR uses the present sum of cash contributed, the present value of distributions and the current value of unrealised investments and applies a discount.
Market Benchmarks: View a complete range of benchmark data for the selected peer group and for each vintage year. Click on the vintage year to see further benchmark analysis.

Median Fund: Shows Called up (%), Distributed (%) DPI, Unrealised Value (%) RVPI for the median fund or other benchmark type.

IRR Quartiles: See IRR Quartiles for the selected benchmark. E.g. all funds in the first quartile will have an IRR greater than the Q1 figure, Q2 is the median fund.

IRR Max/Min: See the maximum and minimum IRR achieved by funds in particular benchmark.

Multiple Quartiles: See Multiple Quartiles for the selected benchmark.

No. Funds: View how many funds are used to calculate the Market benchmarks

Benchmark Tools: Benchmark against median, average or money weighted funds. Change the benchmark criteria (fund type, location or benchmark type).

Preqin allocates quartile ranking to all private equity funds for which we have performance.

**Quartile Ranking** shows which quartile of the relevant peer group the fund falls into. We have specific benchmarks for buyout, venture, early stage, fund of funds, real estate, mezzanine funds, secondaries and distressed PE funds. Funds of a different type are benchmarked against “All Private Equity”.

When calculating the quartile ranking, we put equal weight on IRR and multiple.

Top Quartile Funds (Q1 Funds) are funds with an IRR or Multiple equal or above the upper quartile figures; Q2 Funds are funds with an IRR or Multiple equal or above the median quartile figures but under the upper quartile figures, etc…
Horizon IRRs indicate how the private equity industry is performing during a defined period (i.e. during 1 year, 3 years or 5 years).

Horizon IRRs are calculated using the fund’s net asset value as a negative outflow at the beginning of the period, any cash paid or received during the period and the fund’s residual value as a positive inflow at the end of the period.

Preqin calculates horizon IRRs using cash flow data for over 1,700 private equity funds.

Private equity horizon IRRs should be viewed with some caution as horizon returns are calculated using cash transactions as well as portfolio valuations, which are an estimated value calculated and provided by the general partners. As an illiquid asset, private equity investors are committed for a long period of time and cannot cash in their returns on such short periods.
