

Keep Your BlackBerry 8830 Up to Date

Download the latest operating system enhancements for your BlackBerry 8830 World Edition smartphone.

Verizon Wireless is pleased to announce new software enhancements for your BlackBerry® 8830 World Edition smartphone. The Research In Motion® (RIM®) 4.5.0.138 update includes the latest feature improvements for your device.

Take advantage of the updated performance and features by downloading and installing the software today.

The software enhancements resolve issues in the following areas:

Device performance

- The browser now displays Web pages that were previously not displaying properly.
- The browser renders email messages with HTML Rich Content, including embedded images, external images, font formatting, paragraph formatting, and more.*
- The browser can open a Web page beginning with https://.
- The device manages languages to maximize free space, increases the number of protected messages, and reduces the device memory limit for media on the internal memory.
- The device also includes tips and tricks on device memory management.

Usability

- Meeting reminders give you the ability to dismiss the meeting reminder as expected.
- The content protection feature ensures that a conflicting email recipient list does not display blank email addresses.
- Improved GPS navigation and location search.
- Improved email attachment downloading when using the RSA SecurID application.
- Improved meeting requests. Users can now check attendee availability for the day of the meeting and one week into the future, as well as for existing meetings.*

Multimedia

- Improved audio in the media application when receiving an incoming or outgoing call, that prevents the media application from playing continuously while you're on the phone.
- Improved playlist creation. Users can now specify artist, album, and genre to automatically generate a playlist.
- Media is automatically saved to the microSD™ card when the card is inserted into the device, and the device disallows saving of pictures when there is no microSD card and the device memory is full.

Bluetooth

- Improved overall Bluetooth® performance.
- Consistent .mp3 or .wav file attachment audio over a paired Bluetooth headset.

BlackBerry 8830 World Edition smartphone

* This feature requires BlackBerry Enterprise Server v 4.1 SP5.
