Introduction to Geographic Information Systems (GIS)

PLA 4577 | Time: Tue 7-9pm / Thur 7-9pm | Location: 200 Fayerweather North

Instructor: Jeremy White (jw3187@columbia.edu) | Office hours: Tue 9-10pm by request, Planning Studio, and Google Hangout

Teaching Assistant: Gillian Sollenberger (gs2697@columbia.edu) | Office Hours: TBA

Syllabus : Spring 2014

1. Course Overview

Description
Geographic Information Systems (GIS) are tools for managing, describing, analyzing, and presenting information about the relationships between where features are (location, size and shape) and what they are like (descriptive information known as attribute data). Because its techniques allow one to represent social and environmental data as a map, GIS has become an important tool across a variety of fields including planning, architecture, engineering, public health, environmental science, epidemiology, and business. Further, GIS has become an important political instrument allowing communities and regions to (geo)graphically tell their stories.

GIS is a powerful tool, and this course is meant to introduce students to the basics. Because GIS can be applied to many research fields, this class is meant to give students an understanding of its possibilities along with the capabilities to begin engaging those possibilities.

The class will focus on teaching through practical example. Course exercises are based upon a relationship with the Bronx River Alliance, a local advocacy group for the Bronx River. Exercises will focus on the Bronx River Alliance’s real-world needs in order to give students a better understanding of how GIS is applied to planning situations.

Roughly speaking, the course is organized in two parts. The first half of the course will focus on the basics by leading the students through skills-based GIS exercises. The second half of the course will be focused on individual student projects for which each student will be required to find data and design the methods of analysis to be used based on the techniques learned in the course.

Objectives
The course seeks to provide students with a basic level of familiarity with several aspects of Geographic Information Systems and Geographic Information Science, such that the range of possibilities for GIS-based work is understood and an adequate foundation for engaging those possibilities is laid. Thus, the objectives for the course are:

- Providing an understanding of basic skills necessary to work with GIS, predominantly using ESRI’s ArcGIS software
- Introducing students to software and techniques beyond ESRI products
• Teaching spatial data visualization techniques along with introductory knowledge of effective cartography and additional software for the production of maps and other information graphics
• Teaching skills needed to develop and execute a project requiring GIS as a management, analytical, and/or visualization tool
• Identifying and accessing publicly available data sets
• Teaching the skills necessary to create GIS data through a variety of methods including those offered by global positioning system (GPS) technologies
• Providing an introductory understanding of the ethical questions surrounding data creation, analysis, and representation

2. Class Format

*Standard Class Information*
The class will meet in 200 Fayerweather on Tuesday 7-9pm and Thursday 7-9pm. Barring any technical difficulties, class will begin promptly with a marginal amount of time built into the beginning of every class for students to copy the requisite files from the X:\ drive onto their local machines and/or external hard drives.

*Standard Method of Instruction*
The course will meet twice per week unless otherwise specified. While there are exceptions to this pattern, generally speaking, Tuesdays will consist of a lecture, class discussion and lab time to begin in-class exercises. Thursdays will usually be reserved as a lab session, during which students will have the opportunity to work through assignments with faculty guidance.

*Guest Lectures*
The course will feature a two guest lecturers. The GIS faculty have invited GIS professionals to discuss their work and experience so as to offer students descriptions of GIS use and application beyond the academic context.

3. Evaluation & Grading

*Class participation, Readings & Discussion: 5% of total grade*
There is a considerable amount of reading available on GIS-related topics. Especially at the introductory level, an understanding of the science, theory, and application of GIS is extremely important. Care has been taken to include necessary readings within this course with an understanding that the assignments themselves can overwhelm a student's schedule before the time necessary for readings is taken into account. Therefore, while the suggested reading list is lengthy, the required readings are minimal. Students are expected to complete required readings before class in order to participate fully in class discussion. For full participation points, a student should come to class prepared with questions and comments on weekly required readings and contribute to general class discussions. In the syllabus, readings are listed as:

• Required: for discussion – students should come to class prepared to discuss
• Required – students are required to read as reading will assist in learning/exercise completion
• Reference – optional readings/materials that provide additional information/detail.

*In-class exercises: 0% of total grade*
Because GIS is rooted in computer-based analysis, its adequate teaching and learning requires regularly completed exercises. Successful completion of the course requires that students stay with the schedule, completing exercises in a timely manner, such that skills learned early can be built upon later in the semester. Each week includes ungraded in-class exercises. The results of these exercises are not required to be turned in at the completion of class but do serve as the basis for the graded homework assignments.
**Homework Assignments: 35% of total grade (5% each)**

Most weeks include take-home exercise assignments. While some weeks these graded exercises may be completed during the lab session, the assignments are expected to be completed outside class when necessary. **There are a total of eight (8) homework assignments. You are required to complete seven (7) of those assignments.** Rather than accept late exercises, the GIS faculty allow students to skip the submission of one assignment with the expectation that the skills are learned even if the finished assignment is not turned in. If all eight are submitted, then the lowest grade will be dropped and not calculated with the final grade.

**Problem Set: 15% of total grade**

One assigned problem set will be given mid-semester. It is lengthier and slightly more complex than the homework assignments in that it requires students to apply a combination of skills learned up to that point without the benefit of step-by-step tutorial instruction. The problem set will include questions requiring calculations and numeric responses, analysis with graphic responses (maps, tables, graphs, etc), and written responses on uses of GIS.

**Case Study Reading Response: 10% of total grade**

One reading response paper will be assigned at mid-semester. It is a short paper and presentation assignment requiring students to find, read, and comment on an example of published research that uses spatial analysis and/or specific GIS techniques.

**Final Project: 30% of total grade**

Students are expected to design, research, and complete a final project by the end of the semester. The project is required to be a specific research question answered or explored using GIS. Several deliverables at different times will be assigned to aid students in the completion of the project, and class time toward the end of the semester will be devoted to individual work with faculty guidance and project desk crits. Final projects will include a written and graphical report along with a presentation. Final presentations will be given before a panel of invited guests.

**Submission**

Each assignment will outline the specific requirements for its submission format. Generally speaking, homework assignments must be submitted via Courseworks and submitted in printed, hard-copy format (black and white or full color, as appropriate) in class. Be advised that certain assignments will have digital due dates that are scheduled before class meets. **Absolutely, no late assignments will be accepted.**

**Translation from Scores to Grades**

Students are often understandably concerned with where the lines are drawn between "high pass," "pass," and "low pass." At the end of the semester, students are ranked by the cumulative, weighted scores and approximately the top 20% will receive a high pass.

If, by the University's Election Holiday, a student is in danger of receiving a grade lower than a pass, an individual meeting will be scheduled to discuss and outline what will be necessary to achieve a passing grade.

**Expectation of Academic Honesty**

As always and as with every other course, this class is conducted in accordance with University policy on matters of academic honesty and integrity. Note that instances of plagiarism will not be tolerated, whether in written text, in research design, or in data acquisition and creation. In research we build on the work of others: give credit where credit is due.

Additionally, this course contains a few considerations which should be stated. At several points in the semester, students will be encouraged to look to their peers for collaborative problem solving and troubleshooting especially within the lab and studio settings. Except where otherwise stated in specific assignments, collaboration is welcomed but individual assignments must be conceived and completed individually.
4. Resources & Materials

The X:\ Drive
All course materials will be located on GSAPP's X:\ drive, which also contains the GIS data resources available for student use at GSAPP. The course materials are organized by week and can be found at X:\GIS_Classes\a4577_section1.

Within each week’s folder, there are sub-folders for documents (exercises and assignments), readings, and geographic files (shapefiles, project files, data files, etc).

Recommended Purchases
An External Hard Drive: It is very highly recommended that everyone have an external hard drive to hold data for their assignments and final projects. We suggest a hard drive with a minimum capacity of 20 GB.

One book: GIS for the Urban Environment by Julie Maantay and John Ziegler is heavily assigned in the readings for this course. PDFs of readings are available on the X:\ drive, but these only constitute excerpts of a valuable text.

Courseworks Discussion Board
If you have a question, it is likely that your peers may be presently working out the same issue or may have already found a solution. Students are encouraged to post questions on the Courseworks discussion board and collectively work toward finding answers prior to emailing the TAs and professors. Learning GIS is a techniques-heavy endeavor with several moments that require critical problem solving skills. These skills are substantially better acquired when the solutions are derived through work than from asking your TA.

Office Hours & Meetings
Regular professor office hours will be held weekly on Tuesday 9-10pm, by request, in the Planning Studio, and through Google Hangout during weekdays.

The course TA, Gillian Sollenberger, will announce her office hours during the second week of class. She is also available by appointment.

Digital Service Science Center (DSSC)
Electronic Data Services is located on the lower level of Lehman Library and is a great resource for GIS data and technical questions. DSSC collects spatial data and may have what you need for your final project. Further, if they don’t have the data you're looking for, the data librarians can usually help you find it. DSSC also has technical consultants available for questions regarding data as well as those related to performing certain GIS operations. Their facility is equipped with computer stations (with extremely nice monitors). Check their hours of operation before visiting on the Columbia Libraries website http://library.columbia.edu/content/libraryweb/indiv/dssc.html

The Esri User Forum
There Esri user forum is an excellent resource for technical GIS software questions: http://forums.arcgis.com. It is very highly recommended that you search this forum when you have a question. It's almost a guarantee that someone has had the same issue and the forum is a very quick way to find immediate solutions.

Notes on Email
The professor and TA may not always be able to respond to email questions right away. Therefore, it is very important that you use the other resources available to you. There are several ways to find help if you need it, so please do not let an unanswered email hold you back. One of the greatest assets you will have in this course is your own time management and determination to answer your own questions. Use lab time and office hours wisely.

If you email a technical question to either the professor or TA, be sure to include enough information for us to adequately help you. Necessary information includes, but is not limited to, a complete description of what you
are trying to accomplish and the problem you are encountering, any relevant information regarding the data sets you are using, the steps you have already taken to address your problem (so we don't tell you to do what you've already done), and any necessary screenshots to help us understand what you are doing when we cannot sit with you in front of a computer.

5. Detailed Schedule

<table>
<thead>
<tr>
<th>WEEK 1</th>
<th>Course Introduction, What is GIS, Understanding ArcGIS &amp; GIS terminology</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>TUESDAY</strong></td>
<td>21 January 2014</td>
</tr>
<tr>
<td>Lecture</td>
<td>Course Administration, Syllabus, Introductions; What is GIS? A Brief History of GIS; A Discussion of GIS and Urban Planning</td>
</tr>
<tr>
<td>Lab</td>
<td>Log into Esri Virtual Campus &amp; Start Tutorials</td>
</tr>
<tr>
<td><strong>THURSDAY</strong></td>
<td>23 January 2014</td>
</tr>
<tr>
<td>Lecture</td>
<td>Elements of Cartography; Constructive Map Criticism</td>
</tr>
<tr>
<td>Lab</td>
<td>Esri Tutorials</td>

<td>Maantay and Ziegler: Chapter 4 (required: for discussion) Maantay and Ziegler: Chapter 2 (required)</td>
</tr>
</tbody>
</table>
Maantay and Ziegler: Chapter 3 (required)

Peterson (reference)

Monmonier: Chapter 1 (reference)

Lab
Week 3 In-class Exercise: Joining Tables to Boundary Files

THURSDAY 6 February 2014
Due Homework Week 2: Working with Data and Creating Maps

Lab Finish Week 3 In-class Exercise;
Visualizing Data in ArcScene

Assigned Homework Week 3: Working with Tables: Joining Data & Querying

WEEK 4 Working with Census Data, Part 1

TUESDAY 11 February 2014
Lecture Understanding Census Data & Geometry; Accessing Census Data; Working with Microsoft Access

Readings Peters and MacDonald: Chapter 1 (required: for discussion)
Writing Effective Policy Memos (required: reference – located in ProblemSet1\documents\folder)

Assigned Problem Set: Policy Memo

Lab Week 4 In-class Exercise: Working with Census Data, Part 1

THURSDAY 13 February 2014
Due Homework Week 3: Working with Tables: Joining Data & Querying

Lab Finish Week 4 In-class Exercise
Additional class time reserved for work on Problem Set

WEEK 5 Working with Census Data, Part 2

TUESDAY 18 February 2014
Lecture Interpreting Census Variables; The Decennial Census Versus The American Community Survey; Charts & Graphs for Data Display

Readings Sclossberg (required: for discussion)
Peters and MacDonald: Chapter 2 (required: for discussion)
A Compass for Understanding and Using ACS Data: Appendix 1 (required: reference)

Monmonier, Drawing the Line (reference)
A Compass for Understanding and Using ACS Data (reference)

Lab Week 5 In-class Exercise: The American Community Survey

THURSDAY 20 February 2014
Lab Finish Week 5 In-class Exercise
Class time reserved for work on Problem Set
**WEEK 6** Geoprocessing

**TUESDAY** 25 February 2014  
Lecture  
Geoprocessing Tools: Buffers, Clips, Unions

Readings  
Maantay & Ziegler: Chapter 9 (required: for discussion)

Lab  
Week 6 In-class Exercise: Geoprocessing

**THURSDAY** 27 February 2014  
Due  
Problem Set: Policy Memo

Lab  
Finish Week 6 In-class Exercise; Work on Week 6 homework

Assigned  
Homework Week 6: Area Calculation

**Guest Lecture**  
**Speaker TBD.**

**WEEK 7** Geocoding

**TUESDAY** 4 March 2014  
Lecture  
What is Address Mapping? Location-based Services

Readings  
Maantay & Ziegler: Chapter 7 (required: for discussion)

DCPLION Single Line Street Base Map User Guide (reference)

Lab  
Week 7 In-class Exercise: Geocoding

**THURSDAY** 6 March 2014  
Due  
Homework Week 6: Area Calculation

Lab  
Finish Week 7 In-class Exercise; Work on Week 7 homework

Assigned  
Homework Week 7: Geocoding

Lecture  
**Someone from DSSC will speak about library services to help you with your final projects**  
Please be seating promptly at 7:00pm.

**WEEK 8** Georeferencing & Editing

**TUESDAY** 11 March 2014  
Lecture  
Editing features: Point, Line, and Polygon; Rubbersheeting & Georeferencing; Introduce final project concept

Readings  
Maantay & Ziegler: Chapter 2 (required: for discussion)

Lab  
Week 8 In-class Exercise A: Georeferencing  
Week 8 In-class Exercise B & C: Editing

| Assigned                                             | Homework Week 10: Rasters |

| WEEK 11 GPS Data Collection                           |
### TUESDAY 8 April 2014

**Due**  
Homework Week 10: Rasters

**Lecture**  
Field Surveys; GPS; Aerial Imagery; Creating Metadata

**Readings**  
GPS reading TBD  
FGDC Metadata Guide (reference)

**Lab**  
Week 11 In-Class Exercise: GPS; Additional class time reserved for Final Project Proposal discussions

**Assigned**  
Homework Week 11: GPS

### THURSDAY 10 April 2014

**Due**  
Final Project Proposals

**Lab**  
Finish Week 11 Exercise; Additional class time reserved for Homework Week 11: GPS.

### Week 12 Applications of GIS

**TUESDAY 15 April 2014**  

**Due**  
Case Study Reading Response Papers and Presentations (with discussion)

**THURSDAY 17 April 2014**  

**Lab**  
Review Data Classification  
Meet with students re: final projects

### Week 13 Final Project Development

**TUESDAY 22 April 2014**  

**Due**  
Homework Week 11: GPS

**Desk Crits**  
Class time reserved for Final Project development

**THURSDAY 24 April 2014**  

**Desk Crits**  
Class time reserved for Final Project development

### Week 14 Final Project Development

**TUESDAY 29 April 2014**  

**Desk Crits**  
Class time reserved for Final Project development

**THURSDAY 1 May 2014**  

**Desk Crits**  
Class time reserved for Final Project development
WEEK 15  Final Project Presentations

TUESDAY       6 May 2014
Due            Final Project Presentations -- Everyone's presentation files are due, regardless of which day a student is scheduled to present.

Presentations Half the class will present their final projects

THURSDAY      8 May 2014
Presentations Half the class will present their final projects

FRIDAY        9 May 2014
Due            Final Project Reports -- Everyone's reports are due on Courseworks by 5pm.
