

RANN Study Procedure

1. Baseline: (2012-2017)

- a. Screening instruments
- b. Visit 1
 - i. Neuropsychological evaluation
 - ii. Gait measurement (only selected subjects)
 - iii. Blood draw (optional)
 - iv. Questionnaire (to be returned at a later visit)
- c. Visit 2: MRI sequences, 6 fMRI tasks (Session 2)
- d. Visit 3
 - i. MRI sequences, 6 fMRI tasks (Session 1)
 - ii. EXAMINER battery
- e. Visit 4: Amyloid PET on subset of participants age 55+

2. Follow Up 1 (2017-Present)

- a. Screening instruments
- b. Visit 1
 - i. Neuropsychological evaluation
 - ii. Gait measurement
 - iii. Blood draw
 - iv. Questionnaire (to be returned at a later visit)
- c. Visit 2: MRI, 6 fMRI tasks (Session 2)
- d. Visit 3
 - i. MRI sequences, 6 fMRI tasks 2 (Session 1)
 - ii. EXAMINER battery
- e. Visits 4 and 5: Amyloid and Tau PET for participants age 55+
