March 26, 1946

Dear Herbert,

Many happy returns of the 28th of March and a very pleasant birthday festival to you and yours.

When I (once upon a time) reached the youthful age of 70, my friends had been asked to solve in their addresses the equation:

\[ 0 + 70 = ? \]

I myself could answer that question thus: \( 0 + 70 \) feels like 60.

I hope you can solve your equation in the same way or better and I hope your good health and wonderful energy for all your many humanitarian activities will remain unchanged through the next decade of your life and surely Edith will be your best companion and help in work and relaxation always.

Gabriel and Ernst Richard join me in heartfelt congratulations and all the best wishes for the future.

Affectionately,

Juliuss
