

## **Openness in Research Guidelines**

Columbia University is a nonprofit institution of higher education that conducts fundamental research in basic and applied science and engineering that is widely and openly published and made available to the scientific and academic community. Columbia University does not, pursuant to its statutes, undertake classified work or research requiring national security controls.

Fundamental Research involves the conduct of basic and applied research in science and engineering where the resulting information is freely disseminated within the scientific community.

These Guidelines prohibit discrimination in the conduct of fundamental research based on nationality, country of origin, ethnicity, gender, race or religion. Therefore, Columbia University will not accept any conditions of an award that would restrict any member of a research group, including faculty, students, and staff, from the ability to participate fully in all of the intellectually significant portions of a sponsored project.
