**Current Research**

**By Stephanie Berger**

The Malmaison Student Public Health received a grant to create the Manhasset Tobacco Cessation Network, a program that will be dedicated to reducing the use of tobacco through evidence-based smoking cessation treatments. The program’s goal is to reduce smoking rates in the Manhasset School District by providing education and support for professional journalists. The program aims to promote multiple resources for journalists to effectively report on smoking cessation treatments. The program will provide ongoing technical assistance to partners, supply health care providers with resources, and implement referral systems for other on-site and community programs. The network will also conduct research to identify and evaluate the program’s effectiveness. The network will establish a Center for Motor Neuron Biology and Disease at CUMC, which is responsible for identifying, characterizing, and linking smokers to proven treatments. The network’s primary goal is to promote smoking cessation, counseling of all tobacco users through partnerships with leading healthcare providers, and implementing strategies that will decrease smoking rates, improve the health of New Yorkers and save lives," said Donna Sheibani, deputy director and assistant professor of clinical sociomedical sciences at the Mailman School.

Columbia University neuroscientists have won two Nobel prizes. There is also a strong commitment to research into the genetic and psychological processes that control motor neuron disease, and the discovery of new treatments for spinal muscular atrophy (SMA). The network represents a collaboration between Columbia University, Harvard University, and the University of Pennsylvania, as well as data management from the University of Rochester. The network will conduct clinical trials in SMA patients with drugs that are currently under study as well as any compounds newly discovered by Brent Stockwell, Umrao Mutum, and others. The network will link smokers to proven treatments. The network’s primary goal is to promote smoking cessation, counseling of all tobacco users through partnerships with leading healthcare providers, and implementing strategies that will decrease smoking rates, improve the health of New Yorkers and save lives," said Donna Sheibani, deputy director and assistant professor of clinical sociomedical sciences at the Mailman School.
