L3 Upper New Scotland..... 8 $\frac{2}{3}$ feet

Subdivided as follows:

L3a Dark blue limestone in beds from 3 to 6 inches thick with considerable chert in the lower beds..... 3 $\frac{1}{2}$ feet

L3b Very cherty, bluish gray limestone..... 1 foot

L3c Coarsely grained to very finely grained limestone usually in a single bed. Chert is developed in its lower portion. At times there are mere pockets of the coarsely grained scattered at intervals through the finely grained. This is very fossiliferous..... 2 $\frac{1}{2}$ feet

L3d A dark bluish gray limestone alternating with half inch bands of an arenaceous limestone, the latter showing light and dark laminae and few or no fossils..... 20 inches

The following is a list of fossils identified from L3. The fossils from the different beds were not kept separate.
