INSTRUCTIONS/SUGGESTIONS. READ THIS CAREFULLY!

OMIT ANY TWO (2) OF THE SEVEN 20 POINT QUESTIONS. OMIT ANY THREE (3) OF THE FOURTEEN 8 POINT QUESTIONS.

## INDICATE ON THE NEXT PAGE WHICH 5 QUESTIONS ARE NOT TO BE GRADED BY WRITING DNG (DO NOT GRADE) NEXT TO THE PROBLEM NUMBER.

NO PARTIAL CREDIT on any question except where indicated by the statement SHOW WORK. When work is requested, set up equations (with numbers
substituted in appropriate units) in space calculations on scrap sheet.

IF QUESTION STATES "SHOW WORK" AND YOU GUESS CORRECTLY WITHOUT SHOWING WORK - YOU GET 1/2 CREDIT.

CHECK FRONT BLACKBOARD FOR CORRECTIONS/CHANGES.
IF ANY QUESTION IS NOT CLEAR - ASK DAVID OR ME ABOUT IT!
CONSTANTS AND CONVERSION FACTORS ARE ON THE PAGE FOLLOWING THE LAST PROBLEM. PLEASE LOOK THERE! LAST THREE PAGES ARE FOR SCRAP WORK.
FEEL FREE TO TEAR THESE PAGES OFF.
SUGGESTION: IF YOU HAVE TO COMBINE TWO EQUATIONS TO SOLVE FOR SOME QUANTITY, SUBSTITUTE NUMBERS ONLY AT THE END. ie. IF YOU WANT THE VELOCITY, v, OF A PARTICLE WITH A deBROGLIE WAVELENGTH, $\lambda$, THEN SOLVE IN THE FOLLOWING MANNER;

$$
\begin{aligned}
& \lambda=\frac{\mathrm{h}}{\mathrm{p}} \quad \text { AND } \mathrm{p}=\mathrm{mv} \quad \therefore \lambda=\frac{\mathrm{h}}{\mathrm{mv}} \\
& \text { SOLVING FOR VELOCITY, } \mathrm{v}=\frac{\mathrm{h}}{\mathrm{~m} \lambda}
\end{aligned}
$$

NOW SUBSTITUTE THE NUMERICAL VALUES INTO THE EQUATION. THIS
WAY YOU ARE LESS LIKELY TO MAKE A MISTAKE. IT IS ALSO EASIER FOR US TO FOLLOW YOUR LINE OF REASONING.

REMOVE THIS PAGE PRIOR TO STARTING EXAM.

EXAM TOTAL (188 pts) $\qquad$

1) Hydrogen atoms are excited from $n=1 \longrightarrow n=2$. The electron in the $\mathrm{n}=2$ shell then returns to $\mathrm{n}=1$ emitting a photon. These emitted photons hit a piece of copper (work function, $\Phi=2.40 \mathrm{eV}=3.85 \times 10^{-19} \mathrm{~J}$ ) causing electrons to be ejected. Calculate the energy of these ejected electrons in joules. SHOW WORK ( 20 pts )
a) $1.63 \times 10^{-18} \mathrm{~J}$
b) $0.384 \times 10^{-18} \mathrm{~J}$
c) $2.18 \times 10^{-18} \mathrm{~J}$
d) $0.161 \times 10^{-18} \mathrm{~J}$
e) $1.25 \times 10^{-18} \mathrm{~J}$

ANSWER IS: $\qquad$
2) A typical golf ball weighs 40.0 g . If it is moving with a velocity of $20.0 \frac{\mathrm{~m}}{\mathrm{sec}}$, its deBroglie wavelength (in nm ) is, (20 pts)
a) $1.66 \times 10^{-34} \mathrm{~nm}$
b) $8.28 \times 10^{-32} \mathrm{~nm}$
c) $8.28 \times 10^{-25} \mathrm{~nm}$
d) $1.66 \times 10^{-24} \mathrm{~nm}$
e) $3.31 \times 10^{-21} \mathrm{~nm}$

ANSWER IS: $\qquad$
3) According to quantum mechanics, the energy of a particle in a 1 dimensional box is, $\varepsilon_{\mathrm{n}}=\frac{\mathrm{n}^{2} \mathrm{~h}^{2}}{8 \mathrm{~m} \lambda^{2}}$ where $n$ is the quantum number, $h$ is Planck's constant, $m$ is the mass of the particle, and $\lambda$ is the length of the box. This is the equation that allows us to predict the color of dyes.

What is the wavelength (in nm ) of photon required to excite an electron from $\mathrm{n}=1$ to $\mathrm{n}=2$ in a box of $\lambda=5.0 \AA$ ? SHOW WORK ( 20 pts )
a) 1236 nm
b) 618 nm
c) 412 nm
d) 332 nm
e) $206 \mathrm{~nm} \quad$ f) 824 nm

ANSWER IS: $\qquad$
4) The kinetic energy, $\boldsymbol{\mathcal { E }}$, of a electron is related to the kelvin temperature through the equation, $\boldsymbol{\varepsilon}=\frac{3}{2} \mathrm{kT}$ where $\mathrm{k}=1.38 \times 10^{-23} \frac{\mathrm{~J}}{\text { particle } \cdot \operatorname{deg} \mathrm{K}}$.
You are given an electron with a deBroglie wavelength of $\lambda=76.3 \mathrm{~nm}$. What is the Kelvin temperature of this electron? SHOW WORK ( 20 pts )
a) 0.50
b) 1.00
c) 1.50
d) 2.00
e) 2.50
f) 3.00
$\qquad$
5) When the surface of a piece of potassium is irradiated with light of wavelength, $\lambda_{1}=5000 \AA$, the value of the stopping potential (voltage) necessary to stop the emitted electrons is, $\mathrm{V}_{1}=0.200$ volts. When the wavelength is changed to, $\lambda_{2}=4000 \AA$, the required stopping potential is, $\mathrm{V}_{2}=0.600$ volts. In this problem, YOU DO NOT KNOW the value of Planck's constant. Using this information calculate Planck's constant. SHOW WORK (20 pts)
a) $4.27 \times 10^{-34}$
b) $3.60 \times 10^{-34}$
c) $2.14 \times 10^{-34}$
d) $7.48 \times 10^{-34}$
e) $1.57 \times 10^{-34}$
f) $6.63 \times 10^{-34}$

## (20 pts) ANSWER IS:

$\qquad$
6) Using any information from question 5 and your calculated value of planck's constant (also from question 5), calculate the work function, $\Phi$, of potassium in electron volts (eV). If you did not do question 5 but want to answer this question, use $\mathrm{h}=6.63 \times 10^{-34} \mathrm{~J} \cdot \mathrm{sec} \quad$ SHOW WORK ( 20 pts )

ANSWER IS: $\qquad$
7) Given the following bond enthalpies,

Molecule A has the above configuration. To make it have the configuration of molecule C , the $\pi$ bond in molecule A must be broken thereby forming molecule B where rotation around the N to N single bond occurs. The $\pi$ bond then reforms giving you molecule $C$. What is the wavelength of light, $\lambda$ (in nm), required to initiate this process? SHOW WORK ( 20 pts )
a) 168 nm
b) 733 nm
c) 310 nm
d) 218 nm
e) 425 nm

ANSWER IS: $\qquad$
8) Which of the following molecules would have the shortest bond length? All have single bonds. ( 8 pts )
a) $\mathrm{Na}_{2}$
b) $\mathrm{F}_{2}$
c) $\mathrm{Li}_{2}$
d) $\mathrm{Cl}_{2}$

ANSWER IS: $\qquad$
9) Which of the following ions has the largest radius? (8 pts)
a) $\mathrm{Be}^{2+}$ b) $\mathrm{Li}^{+}$
c) $\mathrm{N}^{3-}$
d) $\mathrm{O}^{2-}$
e) $\mathrm{F}^{-}$

ANSWER IS: $\qquad$
10) The order of increasing ionization energies for the atoms neon, nitrogen, phosphorus, and sodium is; (8 pts)
a) $\mathrm{Na}<\mathrm{P}<\mathrm{N}<\mathrm{Ne}$
b) $\mathrm{N}<\mathrm{Ne}<\mathrm{Na}<$ P
c) $\mathrm{N}<\mathrm{Na}<\mathrm{Ne}<$ P
d) $\mathrm{Na}<\mathrm{N}<\mathrm{P}<\mathrm{Ne}$
e) $\mathrm{N}<\mathrm{Na}<\mathrm{P}<\mathrm{Ne}$

ANSWER IS: $\qquad$
11) A beam of incoming cosmic radiation has a wave number, $V($ nu bar $)=2.5 \times 10^{4} \frac{1}{\mathrm{~cm}}$.
Calculate the wavelength of this radiation (in nm ). ( 8 pts )
a) 650 nm
b) 125 nm
c ) 250 nm
d) 400 nm
e) 350 nm

ANSWER IS: $\qquad$
12) Given the following molecule;

This molecule contains the following number of $\sigma$ and $\pi$ bonds
a) four $\pi$ bonds and six $\sigma$ bonds
b) seven $\sigma$ bonds and three $\pi$ bonds
c) six $\sigma$ bonds and four $\pi$ bonds
d) two $\pi$ bonds and eight $\sigma$ bonds
e) three $\pi$ bonds and eight $\sigma$ bonds
f) none of the above
(8 pts)

ANSWER IS: $\qquad$
13) Which of these molecules is/are nonpolar ; $\mathrm{IF}_{3}, \mathrm{BF}_{3}, \mathrm{NF}_{3}, \mathrm{CF}_{4}$, and, $\mathrm{SF}_{4}$ (8 pts)

ANSWER: $\qquad$
14) Circle the stronger acid in each of the following pairs. (8 pts)
a) $\mathrm{H}_{2} \mathrm{SO}_{3}$ or $\mathrm{H}_{2} \mathrm{SeO}_{3}(4 \mathrm{pts})$
b) $\mathrm{H}_{2} \mathrm{SO}_{4}$ or $\mathrm{H}_{2} \mathrm{~S}_{2} \mathrm{O}_{7}$
15) Give the electronic configuration ( $1 \mathrm{~s}^{2} \mathrm{etc}$ ) and the number of unpaired electrons in each of the following gaseous atoms/ions.

Atomic number of nickel is $28 . \mathrm{UE}=$ number of unpaired electrons.
( 4 pts each: 3 pts plus 1 pt )
Ni

$$
\mathrm{UE}=
$$

$\mathrm{Ni}^{3+}$
$\mathrm{UE}=$
16) List the following ions in order of decreasing ionic radius.

$$
\mathrm{Li}^{2+}, \mathrm{Be}^{2+}, \text { and } \mathrm{B}^{2+} \quad(8 \mathrm{pts})
$$

$\qquad$
17) List the following atoms in order of increasing $2^{\text {nd }}$ ionization energy: O, F, and S. (8 pts)
$\qquad$
18) Which atom has the following successive values of ionization energy, IE, (in kJ/mol)? (8 pts)

$$
\mathrm{IE}_{1}=575, \quad \mathrm{IE}_{2}=1,811, \quad \mathrm{IE}_{3}=2,733, \quad \mathrm{IE}_{4}=11,548, \quad \mathrm{IE}_{5}=14,800
$$

a) N
b) Mg
c) C
d) Na
e) $\mathrm{Al}_{-}$

ANSWER IS: $\qquad$
19) Match up the following bond enthalies (in $\mathrm{kJ} / \mathrm{mol}$ ), 514, 837, 949,1076 with the indicated molecules; ( 8 pts )

$$
\mathrm{N}+\mathrm{N} \_\quad \mathrm{C}+\mathrm{C} \quad \mathrm{C}+\mathrm{O}_{\square} \quad \mathrm{P}+\mathrm{P}_{\square}
$$

20) In a multi-electron atom, how many electrons can have the following sets of quantum numbers? ( $8 \mathrm{pts}-2$ pts each)
a) $\mathrm{n}=2, \mathrm{~m}_{\lambda}=-2, \mathrm{~m}_{\mathrm{s}}=-\frac{1}{2}$
b) $\mathrm{n}=4, \quad \mathrm{~m}_{\mathrm{S}}=+\frac{1}{2}$
c) $\mathrm{n}=3, \mathrm{~m}_{\lambda}=0, \mathrm{~m}_{\mathrm{S}}=-\frac{1}{2}$
d) $\mathrm{n}=3, \quad \lambda=2, \quad \mathrm{~m}_{\mathrm{s}}=-\frac{1}{2}$
21) Use the MO correlation diagram below to answer this question.

Compare the anticipated bond order (BO), bond length (BL), and bond enthalpy (BE) of the following species. Where possible, give the numerical value, otherwise use $<$, or $=$, or $>$.
a) $\mathrm{B}_{2}^{+}$with $\mathrm{F}_{2}^{-}$
(6 pts)

b) Will the following reaction be exothermic or endothermic?

$$
(2 \mathrm{pts}) \quad \mathrm{O}_{2}^{+}+\mathrm{O} \longrightarrow \mathrm{O}_{2}+\mathrm{O}^{+}
$$

ANSWER: $\qquad$

## CONSTANTS, CONVERSION FACTORS, AND EQUATIONS

$$
\begin{aligned}
& \mathrm{C}=3.00 \times 10^{8} \mathrm{~m} / \mathrm{sec}=3.00 \times 1 \mathrm{O}^{10} \mathrm{~cm} / \mathrm{sec} \\
