

*Investigator and IRB Conflicts of Interest*

**David H. Strauss, MD**  
**Associate Clinical Professor**  
**Columbia University Medical Center**  
**Chair, Institutional Review Board**  
**New York State Psychiatric Institute**

Bias greatly hinders research. Conflicts of Interest on the part of the investigator can lead to loss of objectivity in a research study. What are the potential impacts that Investigator Conflicts of Interest have on research? What responsibility does the IRB have in eliminating or managing potential bias in a research protocol? What are the ethical concerns associated with Investigator and IRB Conflicts of Interest? These and other questions related to financial and non-financial conflicts of interest involving investigators and IRBs will be answered during this informative presentation.
