## Pulmonary Circulation

$\qquad$

- Low resistance, high compliance vascular bed
- Only organ to receive entire cardiac output (CO)
- Changes in CO as well as pleural/alveolar pressure affect pulmonary blood flow
- Different reactions compared to the systemic circulation
- Normally in a state of mild vasodilation
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

| Exercise |
| :--- |
| - Pulmonary blood flow increases up to 4- |
| 5x BL |
| - Increased flow accommodated by both |
| recruitment and vasodilation |
| - Net effect is a decrease in pulmonary |
| vascular resistance (PVR) |
| - No further decrease in PVR once all |
| vessels fully recruited and dilated |
|  |

$\qquad$
$\qquad$
Pulmonary blood flow increases up to 45x BL

- Increased flow accommodated by both recruitment and vasodilation

Net effect is a decrease in pulmonary vascular resistance (PVR)

No further decrease in PVR once all vessels fully recruited and dilated

Normal Hemodynamic Measurements During Right Heart Catheterization

Oudiz RJ, Langleben D. Advances in Pulmonary Hypertension 2005;4(3):15-25

| Normal Pulmonary Hemodynamics at Sea Level (Rest and Mild Exercise) and at Elevated Altitude (Rest) |  |  |  |
| :---: | :---: | :---: | :---: |
|  | Sea level Rest | Sea level Mild Exercise | $\begin{gathered} \text { Altitude } \\ (\sim 15,000 \mathrm{ft}) \\ \text { Rest } \end{gathered}$ |
| Pulmonary arterial pressure, (mean) mmHg | 20/10(15) | 30/13(20) | 38/14(26) |
| Cardiac output, L/min | 6.0 | 12.0 | 6.0 |
| Left atrial pressure (mean), mmHg | 5.0 | 9.0 | 5.0 |
| Pulmonary vascular resistance, units | 1.7 | 0.9 | 3.3 |

    Pre-capillary PH:
    Pulmonary Arterial Hypertension
    Definition
- PAP mean \(\geq 25 \mathrm{mmHg}\) at rest or \(\geq 30 \mathrm{mmHg}\) with exercise
```

## AND

```
- PCWP or LVEDP \(\leq 15 \mathrm{mmHg}\)
- PVRI \(\geq 3\) units • \(\mathrm{m}^{2}\)
- No left-sided heart disease
```

$\qquad$

Post-capillary PH:
Pulmonary Venous Hypertension Definition

- PAP mean $\geq \mathbf{2 5} \mathbf{~ m m H g}$ at rest or $\geq 30 \mathbf{~ m m H g}$ with exercise

AND

- PCWP or LVEDP >15mmHg

## Post-capillary PH:

Pulmonary Venous Hypertension Classification

Post-capillary PH:
Pulmonary Venous Hypertension Localizing the Problem

- Left Heart Etiologies - Aorta - coarct, stenosis
-LV -AS, AR, CM, constriction, myocardial disease, MS, MR, ischemic heart disease, congestive heart failure, diastolic dysfunction
-LA - Ball-valve thrombus, myxoma, cor triatriatum

Post-capillary PH:
Pulmonary Venous Hypertension
Localizing the Problem

```
- Venous Etiologies
- Pulmonary Veins -stenosis
-mediastinal fibrosis -neoplasm -pulmonary venoocclusive disease
```

$\qquad$
$\qquad$
$\qquad$

Mixed (Pulmonary Venous and Pulmonary Arterial Hypertension): Definition

- PAP mean $\geq 25 \mathrm{mmHg}$ at rest or $\geq 30$ mmHg with exercise
- PCWP or LVEDP >15 mmHg
- PVRI $\geq 3$ units • $\mathbf{M}^{2}$
- Increased Transpulmonary Gradient Across Pulmonary Vascular Bed

## Effects of pulmonary

hypertension on RV myocardial

- Myocardial peperfititigbes from being both systolic and diastolic to mostly diastolic
- The RV hypertrophies, but coronary blood supply remains unchanged
- RV work is dramatically increased without a compensatory increase in coronary blood flow
- Tachycardia makes everything worse

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Pulmonary Arterial Hypertension:

## Clinical Manifestations - Symptoms

-Dyspnea on Exertion/Rest
-Fatigue
-Chest Discomfort/Pain
-Cough
-Syncope/Presyncope
-Hemoptysis
-Edema
-Hoarseness

| PAH: Clinical Manifestations |  |
| :---: | :---: |
| - Dyspnea | - Syncope |
| - Reduced O2 | - Hypotension due to |
| diffusion | systemic vasodilation |
| - Ventilation- | and fixed pulmonary |
| perfusion | resistance |
| mismatching | - Arrhythmia |
| - Low O2 transport | - Edema, hepatic |
| - Angina | congestion, ascites |
| - RV ischemia | - RV failure |
| - Left main |  |
| coronary |  |
| compression |  |
|  |  |

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Diagnosis of PH: Procedures

- Electrocardiogram
- Chest radiography
- Echocardiogram
- Ventilation perfusion scan (V/Q scan)
- Serologic studies, HIV
- Pulmonary function tests (PFT)
- Sleep study (if indicated)
- Right-heart catheterization (with acute vasodilator testing if PAH)

$\qquad$

PH: Congestive Heart Failure - CXR hilar fullness and haziness

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

Diagnosis of PH: $\qquad$
ECHO May Suggest an Underlying Etiology

- LV diastolic dysfunction Post-capillary pulmonary venous
- MS or MR
- LV systolic dysfunction hypertension
- Congenital heart disease, e.g. ASD, VSD, PDA
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Cardiac Catheterization

$\qquad$

- To exclude congenital heart disease
- To measure PCWP or LVEDP
- To establish severity and prognosis
- Acute vasodilator drug testing

Cardiac catheterization should be performed in patients with suspected pulmonary hypertension

Pulmonary Arterial Hypertension
Classification

$\qquad$

Treatment: Pre-capillary PH Pulmonary Arterial Hypertension

- Treat associated conditions, e.g. thyroid disease
- Early surgery to repair congenital heart disease, e.g. VSD, PDA
- However, if no longer "operable" due to progressive pulmonary vascular obstructive disease, "corrective" surgery is contra-indicated
- Medical PAH Therapy
- Lung or Heart-Lung Transplantation

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

| Acute Pulmonary Edema |
| :---: |
| - Cardiogenic Pulmonary Edema |
| - Noncardiogenic Pulmonary Edema |

## Treatment: Post-capillary PH -

Pulmonary Venous Hypertension

- Surgery to eliminate left-sided cardiac obstruction
- Heart transplantation for left ventricular failure
- Additional medical and/or surgical treatment as needed
- Specific re: left heart or pulmonary venous hypertension etiology
- PAH treatment

## Experience and Reason

$\qquad$
"In Medicine one must pay attention not to plausible theorizing but to experience and reason together . . I agree that theorizing is to be approved, provided that it is based on
facts, and systematically makes its deductions from what is observed . . . But conclusions drawn from unaided reason can hardly be serviceable; only those drawn from observed fact."

Hippocrates (460-377 BC): Precepts
