

# Scoring for the SNAP-IV

## Subscales

The SNAP-IV contains 3 subscales:

1. **Inattention** (items 1–9)
2. **Hyperactivity/Impulsivity** (Items 10–18)
3. **Combined** (items 1–18)

To assess youth’s functioning on each subscale, add up the items on the subscale and divide by the number of items to calculate the mean.

Inattention		Hyperactivity/Impulsivity	
1		10	
2		11	
3		12	
4		13	
5		14	
6		15	
7		16	
8		17	
9		18	
Total: _____ /9 =		Total: _____ /9 =	

## Combined

Combined Mean: \_\_\_\_\_ (Inattention) + \_\_\_\_\_ (Hyperactivity/Impulsivity)/18 =

## Cutoffs

The following cutoffs are considered clinically significant (based on 95th percentile):

Subscale	Teacher	Parent
(Mean of) <b>Inattention</b>	2.56	1.78
(Mean of) <b>Hyperactivity/Impulsivity</b>	1.78	1.44
(Mean of) <b>Combined</b>	2.00	1.67

It is also possible to average parents’ and teachers’ responses. A mean (parent and teacher score of < 1 is considered an “excellent response” to treatment.
