

Introduction to Laboratory Medicine

Steven Spitalnik, M.D.

October 3, 2005

What pathologists do: (clinically)

**We receive any tissue or fluid sample
(from an FNA to a whole patient)
and use any method
(from gross visualization to DNA sequencing)
to either make a diagnosis or provide a
clinician with diagnostically or prognostically
relevant information**

Transfusion medicine

Tests per year (at CUMC):

Total: 4,900,000

“Anatomic pathology”:

Autopsy: 270

Surgical pathology: 59,000

Cytopathology: 60,000

Tests per year (at CUMC):

Total: 4,900,000

“Laboratory medicine”: 4,800,000

Informatics

Anatomic Pathology vs. Lab Medicine

Morphology:

gross, light microscopy, special stains, immunofluorescence, EM

Quantitative and qualitative Analytical methods

Anatomic Pathology vs. Lab Medicine

Hematopathology:

Diagnosis of APL

Clinical history

CBC and smear

Bone marrow aspirate

Cytochemistry and IHC

Bone marrow core biopsy

Molecular Dx: PCR for t15-17

Cytogenetics: FISH for t15-17

Flow cytometry

Border skirmishes:

Dermatopathology

Bone marrow aspirates

Oral pathology

Genetic testing

Microbiology

Muscle and nerve biopsies

Tissue typing

**What pathologists do:
(research)**

**Develop molecular, mechanistic understanding of
how the pathogenesis of a disease leads to
morphological changes and clinical consequences.**

**The goal is for this increased understanding
to suggest new diagnostic approaches and
new treatment regimens.**

**The cycle
of
laboratory testing**

**Idea
Order/Request
Collect
Transport
Receive

Idea

What test?

Why?

Necessity?

Turn-around-time (TAT):

Seconds (Glucose POCT)

Minutes (STAT BMET)

Hours (Routine ELISA)

Days (Blood culture)

Weeks (TB susceptibilities)

How good is it? Sensitivity/Specificity

Order/Request

Paper: formal requisition, prescription, FAX

Computerized physician order entry (CPOE)

Verbal: Phone call, yelling, etc.

Documentation:

ordering physician

ordering location, phone #, etc.

signatures

Errors:

wrong requisition

wrong box checked

requisition discarded

Collect

Phlebotomy:

**Venous
Finger stick
Arterial
Central line
Pediatric**

Urine

CSF

Sputum, wound, oral, eye, etc.

Tissue: bone marrow, lung biopsy, etc.

Temperature: RT, 4°C, 37°C, frozen

Potential errors: mislabeling

The Washington Post

“Patient Dies From Blood Mismatch”

Friday, August 29, 2003

A woman who switched beds to be closer to the window died after she was given the wrong type of blood during surgery at Inova Fairfax Hospital. A technician had taken a blood sample from her roommate, hospital officials confirmed this week.

The death came at the end of a chain of events that began when a technician went to the unidentified patient's room to draw blood so the laboratory could determine her blood type for an operation the next day.

Potential errors: mislabeling

But the technician collected the sample from the patient on the wrong side of the curtain in the semiprivate room. The technician may have failed to perform two identification screens that were required: checking the name on the patient's plastic hospital bracelet and asking the patient to state her name aloud, said Russell Seneca, chairman of surgery at the hospital.

"The technician doesn't recall whether she asked the patient her name or not or whether she checked the armband," Seneca said. "I'm not certain what transpired between the technician and the patient whose blood was drawn."

Potential errors: mislabeling

The next day, surgeons performed a bowel resection on the woman, removing an abscess in her colon that perforated an intestinal wall.

The woman received two pints of the wrong blood during the operation, and toward the end, it became apparent that her blood was not clotting properly. In the recovery room, she plunged into an acute hemolytic transfusion reaction.

The medical team tried numerous treatments to reverse the reaction, but the woman died about 5:30 a.m. on July 24.

Potential errors: mislabeling

Saunders said an internal probe has prompted changes; a second person now accompanies a technician to draw blood for cross-matching and typing to guard against misidentification.

"This was a human error," Saunders said. "This individual who made the error failed to follow our procedures for identification."

The worker, who also was unidentified, was so distraught that she resigned, Saunders said. "Because of the grief ... we want to protect her privacy. We would prefer to just let you know this was an exemplary employee who never had a problem like this before."

Transport

Sneakers

The screenshot shows the FedEx tracking page for a shipment with tracking number 846839303952. The page includes a navigation menu, a search bar, and a detailed results section. The shipment status is 'Delivered' on September 28, 2005, at 10:20 AM. The activity log shows the package's journey from pickup in Durham, NC, through Indianapolis, IN, and New York, NY, to delivery in Newark, NJ.

Tracking number	846839303952	Reference	4016349
Signed for by	A. SHUMER	Delivered to	Receptionist/Front Desk
Ship date	Sep 27, 2005	Service type	Priority Overnight
Delivery date	Sep 28, 2005 10:20 AM	Weight	1.0 lbs.
Status	Delivered		

Date/Time	Activity	Location	Details
Sep 28, 2005	10:20 AM Delivered		
	9:31 AM Arrived at FedEx location	NEWARK, NJ	
	8:13 AM On FedEx vehicle for delivery	NEW YORK, NY	
	6:07 AM At local FedEx facility	NEW YORK, NY	
	3:33 AM Departed FedEx location	INDIANAPOLIS, IN	
Sep 27, 2005	11:07 PM Arrived at FedEx location	INDIANAPOLIS, IN	
	9:24 PM Left origin	DURHAM, NC	
	5:23 PM Picked-up	DURHAM, NC
