

BIOGRAPHICAL SKETCH: CHRIS WIGGINS

PROFESSIONAL PREPARATION

Princeton University	Theoretical Physics	PhD 1998
Columbia College	Major: Physics; Minor: Math	B.A. 1993

APPOINTMENTS

2006-	Associate Professor, Department of Applied Physics and Applied Mathematics, and Center for Computational Biology and Bioinformatics (C2B2), Columbia University
2001-2006	Assistant Professor, Department of Applied Physics and Applied Mathematics, and Center for Computational Biology and Bioinformatics (C2B2), Columbia University
Summer 2001	NSF International Fellow, Hahn-Meitner Institut, Berlin
1998-2001	Assistant Professor/Courant Instructor, Courant Institute, NYU
1998-2001	NSF Mathematical Sciences Foundation Postdoctoral Research Fellow
1998	Visiting Postdoctoral Researcher, Institut Curie, Physico-Chimie Curie, Paris
1993-1998	Graduate student, Princeton University, Department of Physics

DISTINCTIONS

2010	Selected among 100 “Silicon Alley Insiders”
2011-2012	Selected as mentor for TechStars NYC
2008	Featured in April 2008 <i>Scientific American</i> “Insights” piece: ‘At the Edge of Life’s Code’
2008	Selected for (invitation-only) Google/Nature Magazine ‘SciFoo’ interdisciplinary conference
2007	Janette and Armen Avanesians Diversity Award (selected by Columbia SEAS undergraduates)
2007	Selected for (invitation-only) Google/Nature Magazine ‘SciFoo’ interdisciplinary conference
2001	NSF International Fellow, Hahn-Meitner Institut, Berlin
1998-2001	NSF DMS Postdoctoral Research Fellow, Courant Institute, NYU
1989-1993	I. I. Rabi Scholar, Columbia College
1989	Clark Fellow (one of twenty Dallas-Fort Worth area high school seniors selected for fellowship supporting research in collaboration with faculty at the University of Texas at Dallas)

SYNERGISTIC ACTIVITIES

1. Cofounded hackNY.org, an experiential learning program pairing computational and quantitative students with NYC startups via a 10-week structured internship program and twice-annual student ‘hackathons’ (24-hour coding events). Thanks to this effort, represented Columbia in the pages of *Wall Street Journal*, *New York Times*, *Crain’s Business Daily*, *The Brian Lerer Show*, and numerous other media outlets nationally and internationally.
2. Recruitment and development activities for Columbia:
 - (a) April 2012 panel during admitted students’ weekend
 - (b) April 2011 Master Class for admitted undergraduates
 - (c) April 2011 co-organized tour of Google and Betaworks with Columbia Admissions
 - (d) 2011-2012 member of I. I. Rabi Scholars faculty committee
 - (e) June 2010 *Science in the City* lecture during reunion weekend
3. Organized/co-organized workshops and conferences:
 - (a) Program Committee: The 2008 SIAM International Conference on Data Mining;
 - (b) Co-organizer: DIMACS Conference on Networks, January 2007;
 - (c) Co-organizer: The NSF Boulder Summer School (Biophysics), July 2007;
 - (d) Track Chair: IEEE EMBC 2006;
 - (e) Organizer and chair: “The facts of life: data-driven approaches to systems biology” (mini-symposium, APS March Meeting, 2005);
 - (f) Co-organizer: “Machine Learning Approaches for Understanding Gene Regulation” (DIMACS workshop, 2005);
 - (g) Co-organizer: Eighth Annual Japanese-American Beckman Frontiers of Science Symposium, 2005 (U.S. National Academy of Sciences/JSPS).
4. Developed and distributed (open source, i.e., source code freely available) research algorithms:
 - (a) MatStat and NetBoost, algorithms resulting from published research (both through sourceforge.net);
 - (b) GeneClass, Robust-GeneClass, and MEDUSA, algorithms resulting from published research (through www.cs.columbia.edu/compbio);
 - (c) ArtStat, algorithm resulting from published research (through artstat.sourceforge.net);
 - (d) InfoMod, algorithm resulting from published research (through infomod.sourceforge.net);
 - (e) VBMod, algorithm resulting from published research (through vbmod.sourceforge.net);
 - (f) CellMap, algorithm resulting from published research (through cellmap.sourceforge.net).
 - (g) SpecMark, algorithm resulting from published research (through specmark.sourceforge.net).
 - (h) vbFRET, algorithm resulting from published research (through vbfret.sourceforge.net).
 - (i) form-function, algorithm resulting from published research (through formfunction.sourceforge.net/).

- (j) mkboost, algorithm resulting from published research (through mkboost.sourceforge.net/).
 - (k) EDHMM, algorithm resulting from published research (through github.com/mikedewar/EDHMM).
5. Seminars/Colloquia Organized: “Applied Math Lab Seminar,” and “Genomics Journal Club” (NYU; 1999-2000); “Colloquium in Applied Mathematics” (Columbia; 2001-2003).
 6. Developed new courses and curricula: Biophysical Modeling (Columbia; textbook in development) Mathematical Neuroscience with MATLAB (NYU). Curricular development: assisted development of computational biology PhD via Columbia’s C2B2.
 7. Invited to or accepted for extended visits at institutes and workshops both nationally and internationally, including:
 - (a) Kavli Institute for Theoretical Physics, September 2008;
 - (b) Boulder Center for Theoretical Physics, July 2007;
 - (c) Stanford iCME, March 2007;
 - (d) IPAM, UCLA, May 2006;
 - (e) Kavli Institute for Theoretical Physics, August 2004;
 - (f) Aspen Center for Physics, August 2003;
 - (g) Kavli Institute for Theoretical Physics, Spring 2003;
 - (h) Institute for Theoretical Physics, Spring 2002;
 - (i) Les Houches, July 2001;
 - (j) Hahn-Meitner Institut, Berlin 2001 (supported by NSF INT01-07284);
 - (k) Cargese Institute, July 1998;
 - (l) Institut Curie, May–October, 1998;
 - (m) Institute for Theoretical Physics, June 1997.
 8. Volunteered to lead/advise undergraduate and high school researchers: Advised ten VIGRE undergraduates in projects involving machine learning/network classification (summer 2003), and information theory/spectral (graph theoretic) approaches to dimensionality reduction (summer 2004), with results published and presented at national and international conferences; advised four high school students in the Intel Science Competition, including a co-author.
 9. Served as official undergraduate advisor for the Applied Mathematics major since 2003.
 10. Columbia’s faculty advisor for student chapter of SIAM (Society for Industrial and Applied Mathematics) and ADI (Application Development Initiative)
 11. Served on PhD committees at Columbia for students in the following departments:
 - (a) APAM,
 - (b) Biomedical Engineering,
 - (c) Materials Science,
 - (d) Department of Biomedical Informatics (in the College of Physicians and Surgeons),
 - (e) Chemical Engineering,

- (f) Physics,
- (g) Computer Science,

and externally at NYU (computational biology).

PEER-REVIEWED PUBLICATIONS

All published papers are in peer-reviewed journals or highly competitive, peer-reviewed conference proceedings, or peer-reviewed invited book chapters; competitive statistics are noted where available:

Italics indicate my graduate students, postdocs, or undergraduate research advisees

1. *M. Dewar*, **C. Wiggins**, F. Wood. Inference in Hidden Markov Models with Explicit State Duration Distributions. *IEEE Signal Processing Letters*, page To Appear, 2012.
2. *Andrew Mugler*, *Boris Grinshpun*, *R. Franks*, **Chris H Wiggins**. Statistical method for revealing form-function relations in biological networks. *Proceedings of the National Academy of Sciences*, 108(2):446, 2011. ISSN 0027-8424. Sole PI; coauthors are PhD student and undergraduate advisees.

MANUSCRIPTS IN PREPARATION FOR PEER-REVIEWED JOURNALS

1. Quantifying Differences in T-Cell Behavior (with Mike Dustin, NYU Medical School)

ADDITIONAL PUBLICATIONS

1. **Chris H. Wiggins**, *The Data Science Revolution*, 2012 <http://mathaware.org/mam/2012/essays.html>. Invited essay for Mathematics Awareness Month, April 2012, co-organized by The American Mathematical Society, the American Statistical Association, the Mathematical Association of America, and the Society for Industrial and Applied Mathematics.
2. *Anil Raj*, **Chris H. Wiggins**, *A non-negative expansion for small Jensen-Shannon Divergences*, 2008 <http://arxiv.org/abs/0810.5117>.
3. **Chris H. Wiggins** *Quantitative Biology: An Introductory Tour*. 2012. Textbook in development,
4. “Ask the experts: Bayes’ theorem” *Scientific American*, April 2007, p.108.
5. “Bayes’ theorem”, *Scientific American Online* 2006 <http://tinyurl.com/y28wlo>.
6. Adam A. Margolin, Ilya Nemenman, **Chris H. Wiggins**, Gustavo Stolovitzky, Andrea Califano. “On the Reconstruction of Interaction Networks with Applications to Transcriptional Regulation”, <http://arxiv.org/abs/q-bio/0410036>, 2004 (Manuscript accepted into and presented at competitive *Neural Information Processing Systems* (NIPS) 2004 Computational Biology Workshop).
7. **Chris H. Wiggins**, Alberto Montesi, and Matteo Pasquali. “The stochastic spectral dynamics of bending and tumbling.”, <http://arxiv.org/abs/cond-mat/0307551>, 2003.
8. *J. P. Bennett* and **C. H. Wiggins**. “A computational study of mixing microchannel flows.”, <http://arxiv.org/abs/cond-mat/0307482>, 2003 (Coauthor is high school student advised for Westinghouse competition).

ADVISING: CURRENT STUDENTS

1. Kevin Emmett: Expected PhD 2015. Applications of classification of viral hosts.
2. Sakellarios Zairis: Expected PhD 2015. Applications of machine learning to population genetics of viral pathogens.
3. Ricardo Rios: Expected BA 2015. Biophysical modeling and monte carlo simulation in cellular patterning.

ADVISING: PREVIOUS STUDENTS

1. Xuejing Li: Physics student. PhD 2012. Applications of machine learning for inferring predictive models of transcriptional regulatory networks from high-throughput biological datasets.
2. Akiva Bamberger: MS 2012. Applications of machine learning for image analysis in immunological cell movies and biophysical time series.
3. Willie Neiswanger: BS 2012. Applications of machine learning for image analysis in immunological cell movies and biophysical time series.
4. Pawel Przytycki: BA 2012. Applications of information theory for relating biological network topology to population genetics.
5. Anil Raj: PhD 2011. Applications of machine learning and information theory for the analysis and organization of biological networks.

6. Andrew Mugler: PhD 2010. Applications of information theory for relating topology and function in small biological networks.
7. Jonathan Bronson: PhD 2010. Applications of Bayesian inference to biochemical experiments.
8. Jacob Hofman: PhD Summer 2008. Applications of machine learning in network and image data.
9. Etay Ziv: MD/PhD student; 5 papers authored; first author on 3. Recipient of DOE and DOD (Krell CSGF) Fellowships. PhD 2006. Biological networks. Dissertation selected by unanimous vote of the committee for dean's distinction. Currently completing MD.
10. Jon Landers: Master's awarded 2006. Biological applications of machine learning. Currently employed at Epiq Systems (developing machine learning for text data).
11. Manuel Middendorf: 8 papers authored; first author on 5. PhD awarded 2005. Biological applications of machine learning.
12. Robin Koytcheff: 2 papers authored; BS awarded 2005. Currently NSF Postdoc at Brown after PhD student at Stanford (Math).
13. Lawrence David: 2 papers authored; BS awarded 2005. Currently Harvard Junior Fellow after PhD at MIT (Computational and systems biology).
14. Carter Adams, BA awarded 2005. 1 paper coauthored
15. Jen Hom, BA awarded 2005. 1 paper coauthored
16. Chaya Levovitz, BA awarded 2005. 1 paper coauthored
17. Gregory Woods, BA awarded 2005. 1 paper coauthored

INVITED PRESENTATIONS BY YEAR SINCE 2001

2012:

April: Columbia University (Statistics)

April: Columbia University (C2B2)

March: APS March Meeting (Invited talk)

February: Ecole de Physique des Houches (invited workshop on Bridging statistical physics optimization inference and learning)

January: New York Academy of Sciences

2011:

May: Cuny Graduate Center (CS Colloquium)

May: Courant Institutue (special talk for 75th anniversary celebration)

April: Columbia University (recruiting lecture for admitted students)

April: Columbia University (C2B2)

February: Google (NYC)

2010:

October: Harvard Medical School
October: Courant Institute (NYU)
October: Princeton (Lewis-Sigler Institute for Integrative Genomics)
June: Columbia University (Alumni lecture)
April: University of Colorado (Boulder)
April: NJIT (Applied Mathematics)
March: Trinity College (San Antonio)
January: Information Theory and its Applications 2010 (UCSD)

2009:

December: Cold Spring Harbor Laboratory
October: Mathematical Bioscience Institute (OSU)
October: Columbia University (Parents Day)
October: Columbia University (Physics)
September: IDA-CCR (Princeton)
May: Gene Network Sciences (Boston)
April: Institute of Statistical Mathematics (Tokyo)
March: APS March Meeting (Invited talk)
March: Princeton Center for Theoretical Sciences
February: Institute Curie (Bioinformatics Unit)
February: Institute Curie (Section Physico-Chemie Curie)
February: Orsay
February: Imperial College London
February: Institute Curie (Reisler Group Seminar)

2008:

December: Courant Institute (NYU)
December: Albert Einstein Medical College (seminar)
December: Albert Einstein Medical College (chalk talk)
November: Yahoo (New York)
November: DIMACS/DyDAn Workshop on Network Models of Biological and Social Contagion
October: Carnegie Mellon University (Statistics)
October: University of California Merced
October: Gene Network Sciences (Boston)
September: University of Tokyo (Hongo campus)
September: Columbia University (APAM seminar)
September: Kavli Institute for Theoretical Physics (UCSB)
September: Canadian Institute for Advanced Research Workshop Conference on Genetic Networks, Princeton
August: Science Foo Camp (Google/Nature Publishing Group multidisciplinary meeting)
August: NIH All Hands meeting
August: NIH (Computational Biology)
August: University of Tokyo (Komaba campus)
August: Sapporo University

July: Stanford Workshop on Algorithms for Modern Massive Data Sets
July: Peking University (Institute for Theoretical Biology)
July: BUAA (Beijing)
July: Stochastics Summer School (Fudan University Shanghai)
July: Society for Industrial and Applied Mathematics Annual Meeting
July: Santa Fe Institute Complex Systems Summer School (Beijing)
March: Duke Systems Biology
March: Columbia University (C2B2)
March: Columbia University (Nanomedicine Annual Meeting)
February: Santa Fe Institute Colloquium
January: Weill Cornell Medical College (Physiology, Biophysics, and Systems Biology Seminar)
January: UCSD Information Theory and Applications Workshop

2007:

December: Mathematics for Biological Networks Conference (Institut Henri Poincare, Paris)
December: Duke Nonlinear Seminar
November: University of Maryland (Applied Dynamics Seminar)
November: University of Maryland (Center for Bioinformatics and Computational Biology)
November: Institute for Pure and Applied Mathematics (UCLA)
September: Columbia University (APAM seminar)
August: Linnaeus Centre for Bioinformatics (Uppsala Sweden)
August: LANL q-bio summer school and conference
August: Science Foo Camp (Google/Nature Publishing Group multidisciplinary meeting)
July: Boulder Summer School
June: Temple University (Symposium on the Interface — Systems Biology)
May: Columbia (Inverse Problems Workshop)
May: International Workshop and Conference on Network Science
May: Siam Dynamical Systems Meeting
April: Columbia (Physics)
March: NIH All Hands meeting
March: Stanford (Institute for Computational and Mathematical Engineering)
March: Berkeley (Helen Wills Neuroscience Institute)
March: UCSF (QB3, California Institute for Quantitative Biosciences)
March: Gulbenkian Institute (Instituto Gulbenkian de Ciencia)
February: IBM Yorktown Heights
January: NYU Medical School (Skirball Institute)
January: Chicago (Computations in Science Seminar)
January: DIMACS Workshop on Networks and Applications

2006:

December: Columbia University (APAM seminar)
November: Imperial College London
November: Cambridge (DAMTP)
November: Princeton (Biophysics Seminar)
October: Arnold Sommerfeld Center (Ludwig-Maximilians-Universitat, Munich, Germany)

August: Stanford (Computational Systems Biology Annual Meeting)
June: Harvard Medical School (Dana-Farber Cancer Institute)
May: Toyota Technological Institute at Chicago
May: UCSB (Kavli Institute for Theoretical Physics)
February: Columbia University (Society of Physics Students, Physics Department)
January: Cold Spring Harbor Laboratory

2005:

December: Nehru University (Delhi)
December: Kitano Systems Biology Institute (Tokyo)
December: Columbia University (APAM seminar)
November: Genopole (France)
November: Carnegie Mellon University
November: Rutgers (BioMAPS)
September: Yale (Applied Mathematics)
July: The Genome Institute of Singapore
June: National Institute of Advanced Industrial Science and Technology, Computational Biology Research Center (Tokyo)
June: University of Tokyo
May: NYU Medical School (Skirball Institute)
April: Columbia University (Distributed Network Analysis Seminar)
April: IBM Yorktown Heights
March: University of Hawaii (Statistics tutorial)
March: University of Hawaii (machine learning seminar)
March: University of Hawaii (graph partitioning seminar)
January: Columbia University (Nanomedicine Annual Meeting)

2004:

December: Columbia University (APAM)
December: Columbia University (C2B2)
November: Columbia University (Chemical Biology Seminar)
October: Brandeis
October: Princeton (Lewis-Sigler Institute for Integrative Genomics)
October: Columbia University (C2B2)
September: Columbia University (Physics)
August: California Institute of Technology (Applied Physics)
August: Lawrence Livermore National Labs
August: UCSB (Center for Bioimage Informatics)
April: New Jersey Institute of Technology (Applied Math)
February: NYU (Biomathematics Seminar)

2003:

November: Rockefeller University (Center for Studies in Physics and Biology)
October: IBM Yorktown Heights (Computational Biology and Medical Informatics)
May: NYU (Applied Mathematics Lab Seminar)
April: Manhattan College (Graduate Biotechnology Program)

April: Duke (Applied Mathematics)

2002:

November: Rutgers (BioMAPS)

October: Princeton (Biophysics Seminar)

October: Columbia University (Nanoscience course — External guest lecture)

February: Columbia University (Biomedical Engineering Dept)

2001:

December: NYU (Computational Biology)

October: Columbia University (APAM)

April: Sarah Lawrence (Physics)

April: Northwestern (Interdisciplinary Seminar in Nonlinear Science)

February: Columbia University (APAM)

January: Rutgers (Math)

January: NJIT (Applied Mathematics)

EDUCATION ACTIVITIES: COURSES TAUGHT

- *Dynamical Systems*, Columbia, Spring 2012: This course is based in part on Strogatz's book on nonlinear dynamics, supplemented by methods for analysis of real-world time series data, drawn from a variety of sources and my own research. Official enrollment: 59
- *Junior and Senior Seminar: Problems in Applied Mathematics*, Columbia, 2003-present: This is a core course for the Applied Mathematics major which I have completely redesigned from its pre-2003 incarnation. The prior structure of the seminar, working problems in small groups supplemented with occasional outside lectures, became infeasible with the growth of the Applied Mathematics major 2001-present (enrollment has more than doubled during the four years I have been teaching it, 2003-2007, from 40 students to 85 students, despite the fact that it was dropped as a requirement for the Applied Mathematics minor during that time). The course now begins with lectures by myself, graduate students, postdocs, and other faculty for the first few weeks. The remainder of the course is given to lectures by the seniors to each other and to their junior peers in which they investigate and report on research topics which are likely to constitute their "senior projects" for APMA3900 (a supervised research course) in the second semester of their senior years. The juniors are exposed to a variety of application areas of mathematics, attend and critique the presentations of the seniors, and begin planning the research they will undertake during or in the summer preceding their senior year. The prior structure gave an additional point of credit for a report on any topic in mathematics; this credit is now given for a concrete proposal, similar in format to a proposal for research funding, outlining the research they hope to conduct in APMA3900. I have also worked closely with CCNMTL to introduce a course wiki, which the students use to share presentation materials and relevant texts, and a "Google group", which the students use for discussion of mathematical topics related to the content of the lectures.

Official enrollments

Fall 2011: 72 (28 seniors, 44 juniors)
Fall 2010: 72 (43 seniors, 29 juniors)
Fall 2009: 75 (33 seniors, 42 juniors)
Fall 2008: 71 (36 seniors, 35 juniors)
Fall 2007: 85 (40 seniors, 45 juniors)
Fall 2006: 72 (35 seniors, 37 juniors)
Fall 2005: 68 (24 seniors, 44 juniors)
Fall 2004: 58 (27 seniors, 31 juniors)
Fall 2003: 48 (22 seniors, 26 juniors)
Spring 2003: 40 (13 seniors, 27 juniors).

- *Introduction to Biophysical Modeling*, Columbia, 2001-present: This is an entirely original class of my own design. The content changed slightly during the first years but now is a course in mathematical methods, centering on probability and statistics, applied to modern problems at the interface between biology and mathematics: biological physics at the scale of the cell; systems biology; and machine learning applied to computational biology. I worked closely with the Columbia Center for New Media Teaching and Learning (CCNMTL) to videotape the course in Spring of 2006 both to improve my teaching and to provide the students with videos to review difficult material. CCNMTL also assisted me by soliciting feedback from the students as to how my teaching could be improved, and we worked together to implement these suggestions. With the assistance of energetic students and TAs over the past two years, this material now comprises a book manuscript of approximately 270 pages. Several publishers are interested in publishing this manuscript.

Students enrolled from a variety of departments, schools, and campuses, including APAM, Physics, Chemistry, Biological Sciences, Biomedical Engineering, and the Department of Biomedical Informatics (in the College of Physicians and Surgeons). Official enrollments (does not include auditors)

Spring 2011: 16
Spring 2010: 5
Spring 2009: not given
Spring 2008: 12
Spring 2007: 15
Spring 2006: 14
Spring 2005: 10
Spring 2004: 14
Spring 2003: 12.

- *Supervised research*, Columbia: 2003-present: Since 2003, I have advised 39 students in undergraduate or graduate supervised research courses, including APMA3900, APMA6650, APMA9301, APMAE9900, and G6001 (supervised research for the Department of Biomedical Informatics in the College of Physicians and Surgeons).

- *Mathematical Neuroscience*, NYU, Spring 2001: This was an original course designed in collaboration with David McLaughlin. The course material focused on mechanistic models of single neuron electrophysiology and their relation to experiments on visual processing.
- *Chaos and Dynamical Systems*, NYU, Fall 2000: This was an original course of my own design, drawing on material from the textbook of Steve Strogatz, supplemented by numerical assignments of my own in MATLAB.
- *Ordinary Differential Equation*, NYU, Spring 2000: This was a core course for applied mathematics undergraduates, taught from the textbook of Edwards & Penney.
- *Linear Algebra*, NYU, Fall 1999: This was a core course required for a variety of quantitative majors, taught from the textbook by David Lay.
