## Disjoint Set Data Structure

Items :  $X$

Maintain Sets  $S_1 \dots S_k$

Disjoint  $S_i \cap S_j = \emptyset \quad \forall i \neq j$

Make Set ( $x$ ) - create a one element set

Find( $x$ ) - return the "name" of the set  
containing  $x$

Union( $x, y$ ) - put together  $x$ 's &  $y$ 's sets

Nov 5-4:32 PM

A Set as a tree w/ nodes point to parents,  
name of set = root

Nov 5-4:34 PM

Time for Find =  $O(\text{ht of tree})$

Unions make trees grow.

Nov 5-4:42 PM

Union by rank

Make the tree w/ fewer nodes a child  
of the <sup>root of the</sup> tree w/ more nodes

7 / 10 100% Find

**Idea:** Consider edges in increasing order.

MST-Kruskal( $G, w$ )

- 1  $A \leftarrow \emptyset$
- 2 for each vertex  $v \in V[G]$
- 3     do MAKE-SET( $v$ ) ✓
- 4 sort the edges of  $E$  into nondecreasing order by weight  $w$
- 5 for each edge  $(u, v) \in E$ , taken in nondecreasing order by weight
- 6     do if FIND-SET( $u$ )  $\neq$  FIND-SET( $v$ ) 2E
- 7         then  $A \leftarrow A \cup \{(u, v)\}$
- 8             UNION( $u, v$ ) ✓
- 9 return  $A$

V MAKESETS  
V UNIONS  
E FINDS

How big does the ht of the tree get?

In order to increase the ht. of a tree, the # nodes has to at least double.

Nov 5-4:48 PM

Look at node  $v$ , how many times can it be in the tree that is on the small side of a union

Between two instances of being on the small side of a union, your

tree size must at least double  $\therefore$  only on small side  $< \lg V$  times

$\Rightarrow \text{height} = O(\lg V)$

Nov 5-4:53 PM

Kruskal  
Sort  $O(E \lg V)$   
→  $O(E \lg V)$  rest of alg.

Nov 5-4:56 PM

path compression

whenever you touch  
a node, make it  
a child of the root.

Nov 5-4:58 PM

Nov 5-5:12 PM

Running time =  $O(\lg^* V)$   
 of one  
 op.  
 (height tree)

| $x$                    | $\lg^* x$ |
|------------------------|-----------|
| $< 1$                  | 0         |
| 1-2                    | 1         |
| 2-4                    | 2         |
| 4-16                   | 3         |
| $2^4$ - $2^{16}$       | 4         |
| $2^{16}$ - $2^{65536}$ | 5         |
