

Fig. 13.1. Dr. Robert S. Cooper

Sophie's Planet #9: Chapters 13 & 14 (Climate Eruption & The First Team)

02 June 2020

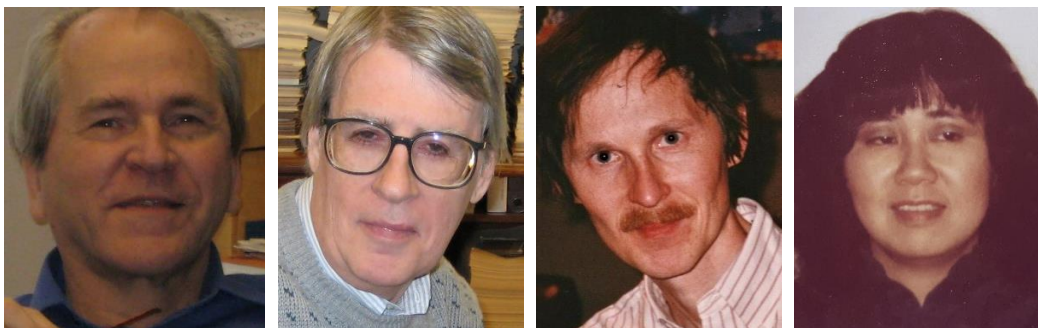

James Hansen

Dr. Robert S. Cooper was a commanding leader and visionary, who led the weather and climate eruption in NASA when he became the Goddard Space Flight Center Director in 1976.

The eruption rattled the walls of the Goddard Institute for Space Studies in New York, but our budding planetary and climate research programs survived, thanks to a group of then young scientists, pictured here in more recent times (except Tony and Makiko in 1970s photos).

Here are drafts of [Chapters 13 & 14](#) of *Sophie's Planet* for fact checking.

I opened a Twitter account @DrJamesEHansen, (<https://twitter.com/drjamesehansen>), but will minimize interactions until the book is finished.

Andy Lacis, Larry Travis, Gary Russell and Makiko Sato

David Rind, Bill Rossow, Tony Del Genio and Inez Fung
