DeCarlo, L. T., and Zhou, X. (2021). A latent class signal detection model for rater scoring with ordered perceptual distributions. *Journal of Educational Measurement*, *58*, 31-53.

First page, second sentence should be:

"CR items differ from selected-response items, such as multiple choice, in that raters are needed to score CR items."

p. 37 – the direction of severity is reversed, 9th line from bottom should read "positive values of ϕ_j indicate leniency and negative indicate severity". And so ϕ_j is really a leniency parameter; note that the sign is reversed in DeCarlo, Kim & Johnson (2011) so that it is a severity parameter.
