

DeCarlo, L. T. (1998). Signal detection theory and generalized linear models. *Psychological Methods*, 3, 186-205.

Typo correction: on page 201, the “Choice Theory Parameterization” equation should have the signs reversed for the first term as follows:

$$\text{logit } p(Y = 1|X) = \frac{-c + (\Psi_s + \Psi_n)/2}{\tau} + \frac{\Psi_s - \Psi_n}{2\tau} X$$
