

September 2016 Global Temperature Update

September 2016 was globally the warmest September in the instrumental record, i.e., since 1880. The 12-month running mean is 1.04°C relative to 1951-1980 or 1.31°C relative to 1880-1920. It is apparent that 2016 will break the prior record by a wide margin.
