

# September 2016 Global Temperature Update

September 2016 was globally the warmest September in the instrumental record, i.e., since 1880. The 12-month running mean is  $1.04^{\circ}\text{C}$  relative to 1951-1980 or  $1.31^{\circ}\text{C}$  relative to 1880-1920. It is apparent that 2016 will break the prior record by a wide margin.
