1a. Increase of synthesis (L-DOPA)
1b. Inhibition of synthesis (α-methyltyrosine)
2. Interference with vesicular storage (reserpine, tetrabenazine)
3. Stimulation of release of DA at nerve terminal (amphetamine, tyramide)
4. Blocking of DA receptors and autoreceptors (antipsychotics: perphenazine, haloperidol)
5. Inhibition of reuptake (cocaine, amphetamine, benztpine)
6. Inhibition of breakdown (paroxetine)

Antipsychotic
Can produce psychotic symptoms
