Legislative Report

Pataki's Last State of the State
By Ellen S. Smith

In his 12th and final State of the State address, setting forth his agenda for 2007 (4/01/06-3/51/07), Governor George E. Pataki continued to signal strong support for the state's higher education institutions and the contributions they make to economic development.

Notably, the governor has committed to investing an unprecendented $600 million in a state-wide research initiative—a combination of public/private matching funds— that, he said, will "capitalize on the strength of New York’s research institutions like Sloan Kettering, Mt. Sinai Hospital, SUNY and Columbia University to fuel even more research, jobs and opportunity in the Empire State.”

In addition, Pataki set forth the goal of making New York the national leader in preparing students for careers in math, science, engineering and technology. To accomplish this, he announced he would provide an additional $10 million in supplemen
tive package of educational reforms, including:
• New scholar-
ships—reports di-
ctly as much as $4,350—for students at public or private colleges and universi-
ties who pursue math and science degrees and commit to teach-
ing in New York State (free tuition for stu-
dents at CCNY or CUNY who do so)
• More math and science high schools across the state
• New math and science summer pro-
grams for middle-
school children

Governor Pataki submitted a budget to fund these proposals on Jan. 18, which included further sup-
ports for Columbia’s scientific endeavors. Full details are avail-
able at www.budget.
