The “Design Checkpoint” is April 11, 2002.
I will meet with each team on that day probably after 6PM. TA will set up the times.
Each team should make a 20minutes presentation on the information I asked for below.
In addition, each team should provide a 5 page design document that covers the following (by April 15 (extended), 2002, 5 PM to TA in HTML or MS-Word):

1. Project Goals
2. System Software Model
   - Algorithms, data flow diagrams, APIs
3. Protocol Description
   - Protocol operations, state machines, data main structures, messages
4. How is doing what (team member’s tasks)
5. Timeline to demo-day
