1. The black marks should be recognized as
   a. developer drops
   b. static electricity *
   c. powder from the gloves
   d. fixer drops

2. This occurs
   a. close to electrical wires
   b. film is pulled out of cassette rapidly in dry weather *
   c. film is pulled out of cassette rapidly in wet weather
   d. when exposed to electrical light

3. The lucent structure indicated by the "A"
   a. periapical cyst
   b. maxillary sinus *
   c. nasal cavity
   d. granuloma
   e. infra orbita

4. The anatomic structure indicated by the "B"
   a. artifact
   b. external oblique ridge *
   c. internal oblique ridge
   d. alveolar fracture

Developer drops will be round and dark. Fixer drops will be round and clear. Powder from the gloves has a similar appearance but is not as elongated.

An artifact is not an anatomic structure.
