General Outline

Reference to events—things that happen or occur, such as Brutus’s stabbing of Caesar or John’s falling in love with Mary—is a pervasive feature of human thought and language. Moreover, the event concept plays a dominant role in the formulation and analysis of a wide variety of philosophical issues, such as causation, the mind-body problem, or the nature of time. The aim of this seminar is to set up the main coordinates for an understanding of this concept and for a critical assessment of its philosophical implications and applications.

Topics to be discussed: the role of events in the logical and semantic analysis of natural language; their metaphysical status; their identity and individuation criteria; the distinction and classification of various types of events and event-like entities (such as processes and states, and perhaps facts); their role in the philosophy of action and causation; their role in the philosophy of space and time.

Requirements

The course will be run as a seminar. Requirements for E-credit: active participation, a short seminar presentation (20%) and a final paper (80%). The final paper is due by Monday, December 15. Requirement for R-credit: active participation and short seminar presentation.

Readings

Recommended book: J. Bennett, Events and their Names, Hackett 1988. (Copies have been ordered at Labyrinth Books).
